

Grading containers, and audit walks

You decide whether a container goes back into service, gets held, or comes out of the fleet. Clariq turns that decision into one screen, and keeps your grade, your reasons and your photographs for the life of the container.

Who this is for	Inspectors
Reading time	Ten minutes
What you need	A phone with a camera, and your work email address
The golden rule	The grade is the decision. There is no second step

Where you sit in the loop

Nothing you record can be erased. If you grade something wrongly, an Admin records a correction and both entries remain. That is what makes your inspection worth something to an auditor two years from now.

Your home screen

The queue is the screen you will live in. It is always in date order, oldest first, so you never have to decide what to pick up next.

1 How many are waiting, and how long the oldest has been there.

2 Your queue: everything waiting for a wash or an inspection, oldest first.

3 Walk a store and tap what you can see. Page 5.

Signing in, once

1. Open clariq-hub.netlify.app in your phone browser

Type `clariq-hub.netlify.app` into Safari or Chrome. There is nothing to install.

2. Type your work email address, tap **Send me a link**

There is no password to remember. Clariq emails you a link that signs you in.

No email after a minute? Look in junk mail. The sender is Clariq.

3. Add Clariq to your home screen

iPhone: share button, then **Add to Home Screen**. Android: three dots, then **Install app**. After that it is one tap, and you stay signed in for 30 days.

Inspecting

1. Open the queue, or scan the container in your hand

Check a container lists everything waiting. Scanning is quicker when you are already holding it.

2. Work through the sub conditions

The form asks about the body, the closure, the threads, the label and whether the QR still reads. Answer what you see.

3. Take a photograph of anything you are marking down

It attaches to this inspection for good. A photograph is worth more than a sentence of description.

4. Give the grade

The grade is the outcome, so choose it carefully and the app does the rest.

Grade	Means	What happens next
A	Excellent	Straight back into stock
B	Good	Back into stock
C	Serviceable	Back into stock, flagged to watch at the next return
D	Not fit to use	Quarantined. A reason is required, and somebody with authority decides
E	End of life	Retired. A reason and an estimated weight are required

If you have been given authority

Some inspectors are given the extra permission to release a container from quarantine or to retire one. If you have it, you will see **Release** and **Retire** with a note to write. If you do not, grade it D and it waits for somebody who has.

Audit walks

An audit walk is a stocktake on your phone. You walk a store, tap what you can see, and the record reconciles itself as you go.

1. Menu, then Do an audit walk

Choose the site and the room you are standing in. If there is only one, it is chosen for you.

2. Scan or tap each container you can see

Each one turns green with the time you saw it.

3. Leave anything you cannot find

Never tick something you did not see. The gap between expected and seen is the whole value of the walk.

4. Finish the walk

It is kept as a record with your name and the date, and the list of anything missing goes to whoever needs to chase it.

✓ You can

- Record returns, inspections and grades
- Quarantine anything you are unsure about
- Run audit walks and see every report
- Attach photographs and notes

X You cannot

- Fill or dispatch containers
- Release from quarantine or retire, unless you have been given that permission
- Change customers, sites, products or settings
- Edit or delete a recorded inspection

Containers that are not ours

On an audit walk you will meet containers that are not ours: the customer's own bottles, and other suppliers' drums. They belong on that organisation's register and are theirs to record, so the app will not let you sight them. That is deliberate, not a fault.

Keep this by the inspection bench

If you would not send it to a customer yourself, it is not an A, B or C.

If something goes wrong

What you see	What it means, and what to do
Can't reach Clariq	No phone signal where you are standing. Nothing was recorded and nothing was lost. Move to where you have signal and tap again.
The camera will not open	The app names the reason: permission not given, no camera, camera busy in another app, or an insecure address. Fix that one thing, tap retry.
The button I want is not there	That step does not make sense for this container yet. The buttons you see are always the ones that are allowed right now.
I recorded the wrong thing	Tell an Admin. Nothing is ever deleted, so they record a correction and both entries stay in the history. Do not try to hide it.
The QR code will not read any more	Mark it on the inspection. The container keeps its number: a new label is printed with the same number and stuck over the old one.

The ? on every screen

Top right of the title. It opens the help for that exact screen, not a search box.

Ask Clariq

Type a question the way you would say it: "how do I print labels". You get the steps and a button that takes you there.

When in doubt

Grade it D and write the reason. A container held for a day costs almost nothing. One that fails on a customer's site costs the account.

Write reasons a stranger could read

Your note is read by somebody who was not there, possibly two years later. "Hairline crack at the base of the neck, see photo" beats "damaged".
